

HSBC Global Tech EVP

When you picture 'banking', what do you see?

A physical branch,

your phone,

or maybe even a virtual space?

HSBC is redefining how our bank works

and how the world banks.

And our technology teams are building innovative solutions to help achieve this mission.

Our aim?

To make banking simpler, safer and faster for every customer.

We use cutting-edge technologies like quantum computing, machine learning and AI,

putting the power of HSBC in every pocket with personal banking apps,

cutting cybercrimes through automated screening,

and speeding up transactions through blockchain technology.

All this innovation is powered by one thing: our people.

Fuelled by a culture focused on impact, growth, and empowerment,

with a global team of technologists and tech centres in China, India, Mexico and Poland,

we work across borders to create and deploy innovations at pace and at scale.

All in a dynamic, collaborative environment

where you'll always be learning

and where you can work the way that suits you.

What does the future of banking look like

when you're building it?

Join the digital-first bank that's powered by people.
